## Tableau Work Example

### Formation: 4-2-3-1

#### Strengths

They are hard-working team with good wingers especially number 7. Their midfield seemed strong, and their midfielders are physically strong and good in the air. They can keep the possession and were good in passing.

#### Weaknesses

Probably their weakness is their back four. They don't have great centre backs in terms of being quick and strong. They are strong in the air but not on the ball. They also leave a big gap between them meaning the opposition striker has more space to move into channels. The team tried to play press all the time which is not possible and were out of fitness in the 40<sup>th</sup> minute. Also, they were not that clinical in finishing having around 7 shots and scoring only one goal (with one goal after an error).

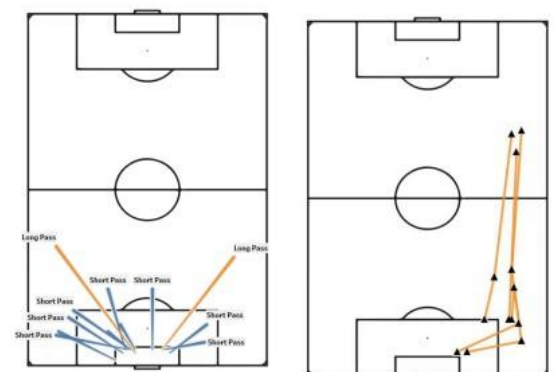

The images above display how the team played in and out of possession. Out of possession, they tried to overload the midfield with number 8 being in front of centre-backs. They played a high press but only first 40 minutes as they tried to trigger it all the time which turned out to be really hard because of fitness levels.

As soon as they regained possession, they tried to find the wingers (number 7 and 11) with the striker (number 9) moving deeper into the midfield leaving space behind him. There was also a gap between their centre-backs which in counterattack can be a big weakness since there is a big space between them.

### Most used pattern of play

#### GK Distribution

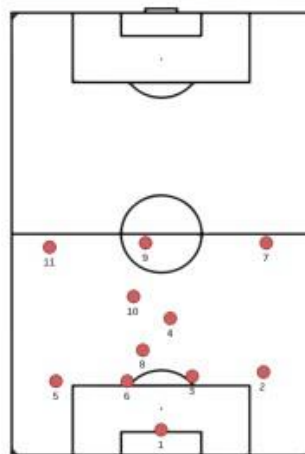

GK distribution was mainly through short passes with an occasional long pass to wingers. He is strong on a ball but sometimes when a high press is put on him, he can do mistakes (for example the penalty he made). If there is a good press triggered on the team there is a huge chance of scoring a goal.

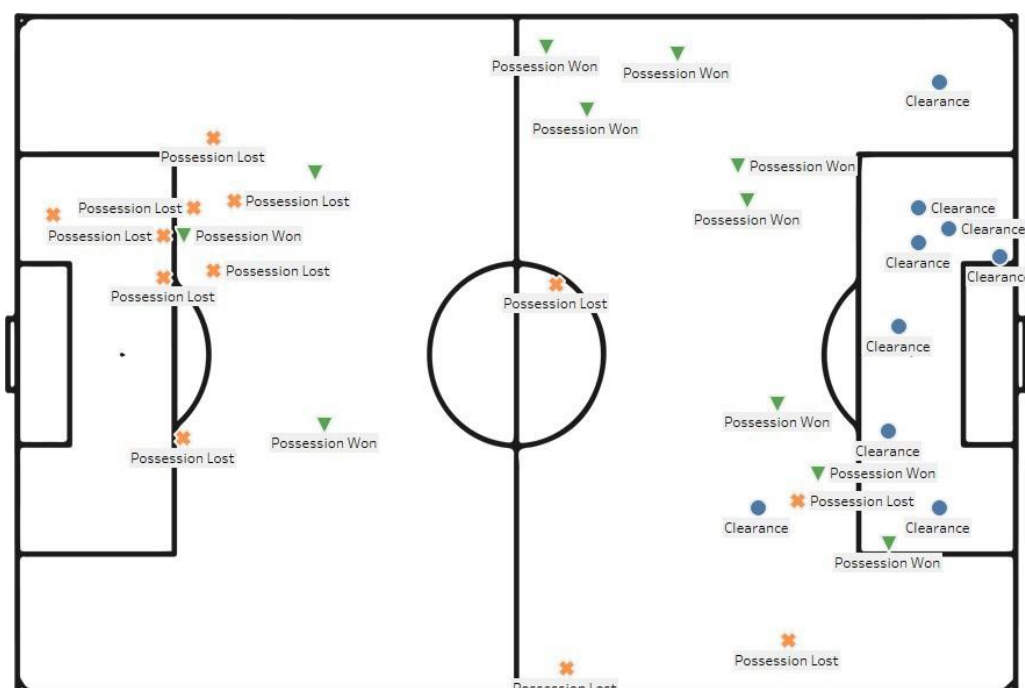

### Out of possession shape

### In possession shape

\*number 5 was replaced by the number 20 in the first 10 minutes
