HR Department

To whom this may concern,

I am Pedro Satorre-Mulet, a Physics graduate (at [Lancaster University, UK](#)) and Data Science postgraduate (at [Universität Potsdam, Germany](#) - please refer to my CV). I have a true passion for sports, football in particular, and I would love to apply AI/Data Science/Analytics to contribute in your club succeeding and growing further via the assistance of data models, visualizations, and insights!

Most recently, I just graduated from my masters in Data Science, doing my [master's thesis](#) on the application of Data Science & GNNs to football (using both event & tracking data), supervised by [Gabriel Anzer](#) - Head of Football Data Analytics @ [RB Leipzig](#) (please check his [recommendation letter](#)).

I acknowledge that I do not have any work experience yet but, this has been due to delicate family health circumstances which I chose to prioritize over working, for as long as I was a student. Even though this factor might seem like a handicap, I want to think of it as something positive instead - I say this because I believe that you will not find any other candidate who is more excited and willing to work (as much and as well) as myself!

I am interested in working at your club. I would love to join your club's Football Data Science/Analytics team - if it is possible, I would be delighted to interview for the position.

Kindest regards,  
Pedro Satorre-Mulet

P.S.: [Here](#) I provide you with a link to a folder with **Static & Dynamic Visualizations** that I made (as **extra** work) for my thesis, using the Tracking Data provided by Mr. Anzer.
