To whomever may attend,

my name is Juan Manuel Chazarra. I am a Spanish male from Orihuela, a city in the south-east of Alicante. I am a sport passionate, and that aspect of my personality is what led me to focus my working life to sports. My greatest hobby is football in all its dimensions, even so, I enjoy every way of testing my athleticism with any kind of activity. Furthermore, I am also a frequent traveler and enjoy getting to know new places and cultures. Due to that I have spent some time living abroad during my life.

I am a Sports Science graduate from Granada University. Choosing the 'specialty in football' branch. I was for a whole academic year studying in TUM Munich, in an exchange program. Once finished my bachelors' degree I got my masters in Big Data applied to Sports. Furthermore, I obtained a 'University Expert in tactical analysis' title and 'University Expert in Football direction' title, both in LaLiga Business School, top level institution in Spain in football management.

My work experience in the football industry began with an internship in season 18/19 in Granada CF's scouting department and then, in season 20/21 also in Granada CF as tactical analyst of the U23 team and as scout for the football direction department, where I managed both national and international markets at different levels, focusing mainly in senior football. I also assisted in the physical conditioning sometimes due to my capabilities. My next experience was as a full-time scout at Real Valladolid CF, where I develop tasks as online and on-site scout in Madrid, mainly for senior football. Specializing in Belgium and Netherlands football. I also collaborated with the methodology department developing databases with our data tool and ways to improve our approach to scouting and our own teams' management. Also designed methodology to approach scouting through data at disposal of the club, working as Data Analyst.

Currently I am working as Head of the Analysis Department in ESC LaLiga & NBA sporting complex in Madrid, in charge of the performance analysis of the football squads competing in the project and of the players' individual analysis. Developing analysis methodology and helping to progress in the build-up of this project by LaLiga.

I believe I would be suitable for your position as I already have experience at the highest level in the world of football, in clubs participating in 1st and 2nd division LaLiga and Europa League. Having taken part in transcendent decision-making meetings in the football directing area and adjusted to fast-paced environments, fast acting and working irregular hours to meet deadlines or sudden requests. Maintain too good relationship football agents in European market mainly. Unfortunately, I have also lived a general direction transition in my previous clubs, so I know what it is like to work in unstable environments with high degree of uncertainty and work to develop. Furthermore, having been involved in the technical team of a squad gives me an alternative point of view and experience in the matter. Also, I have been involved in Academy football high level of expertise required tasks. I am easygoing, I know how to work in teams and consider myself a proactive person, with a strong will of generating value and help others to progress for a mutual benefit and I contribute to create comfortable and pleasant environments, which I believe it is key to a successful work. I feel really motivated for giving everything I have, contribute as much as possible and grow professionally.

I am a common user of some of the frequently used tools used in the in the industry, such as Longomatch, NacSport, Wyscout, InStat, Scouting System or Scout7, WIMU, HUDL suite, SmrtStats, Impect, SkillCorner, BeSoccer Pro. Also, I am very familiar with data managing languages and programs; Python, R, Databricks, Tableau and Microsoft Power BI. Microsof Office suite.

I have been studying English since I was 6, so I am fluent in both English and Spanish languages. Even outside my job I am very passionate about football, and I keep track of national and international leagues. I am currently beginning my research for writing an academical book about some phases of the game in Premier League teams for an Argentinian publisher. In addition, I am also involved in some football schools in Spain and UK as occasional lecturer.

Without further ado, thank you for spending some time on reading this letter.

Yours faithfully,

Juanma.
